Skills

Languages: Java, Groovy, Python, JavaScript, TypeScript, C#, SQL, Shell (bash/ksh/sh/zsh)

Databases: MySQL, MSSQL, Postgres, Sqlite

Tools: Ansible, Jenkins, Gradle, Make, Artifactory, Vault, Docker, Kubernetes, Helm

Platform: UNIX, TCP/IP, UDP, SIP, DNS, DHCP, SSL, TLS, HTTP/HTTPS, GraphQL

Professional Experience

PRO Unlimited at Apple Inc., Sunnyvale, CA December 2019 - present

Release Engineer

- Spearheaded the creation of dynamic, scalable, and modern CI solutions for apple.com, empowering seamless software releases for interactive and retail groups.
- Created cutting-edge CLI tools in Node.js and Python utilized within CI pipelines, streamlining development processes and enhancing efficiency.
- Architected secure delivery infrastructure using containerization and orchestration technologies (Docker, Kubernetes, Helm) allowing rapid deployment of microservices.
- Developed custom internal dashboard aggregating key internal metrics used by stakeholders to improve project lifecycle management.
- Managed infrastructure updates using Ansible playbooks to ensure systems met internal InfoSec standards.

TEKsystems at Apple Inc., Sunnyvale, CA July 2018 - December 2019

Full Stack Developer

- Lead the development of dynamic testing frameworks for Framework components of Apple.com, leveraging nodejs (Mocha, Selenium, TestCafe) to ensure quality standards were met.
- Developed an authentication library that bridged tests with Apple's internal environments.
- Employed Docker-based containers to ensure portability and consistency of tests, greatly improving testing infrastructure.
- Crafted Jenkins pipelines using Groovy, seamlessly integrating test harnesses for efficient continuous integration.
- Engineered multiple report interfaces for test results, programmatically integrating with existing systems and fostering effective collaboration.
- Created reliable CLI tools for augmenting manual testing and boosting turn-around times.

Excelon Development (Remote) February 2018 - July 2018

Consultant

- Solely responsible for driving quality assurance efforts for a Kanban-style dashboard app for Slack, showcasing exceptional QA skills and attention to detail.
- Automated daily testing tasks using JavaScript and Selenium WebDriver, streamlining workflows and improving overall efficiency.
- Introduced standardized QA documentation, enhancing clarity and maintaining consistency in testing processes.

American Residential Warranty, Boca Raton, FL April 2016 - May 2018

Senior Support Engineer

- Developed a comprehensive functional testing framework utilizing Selenium WebDriver (Python), ensuring top-notch software quality.
- Managed pre-production environments (Debian Linux) proficiently using Ansible, guaranteeing smooth deployment and configuration management.
- Integrated the functional testing framework seamlessly into Jenkins and Ansible, optimizing testing processes and enhancing collaboration.
- Orchestrated back-of-house operations (AD, Azure, five9 VCC) through the strategic implementation of Python and PowerShell scripts, streamlining operations and improving overall efficiency.

Sato Global Solutions, Fort Lauderdale, FL July 2015 - September 2015

Software QA Engineer

- Engineered a robust test harness for a web service using C#, SQL, and JSON, ensuring thorough and effective testing.
- Generated comprehensive nightly test reports using Jenkins, .NET, and ReportUnit, enabling stakeholders to make informed decisions.
- Successfully migrated the organization's existing SCM solution from SVN to Microsoft TFS, showcasing strong technical proficiency and project management skills.

American Airlines, Phoenix, AZ August 2014 - January 2015

QMO Test Engineer

- Developed automated test cases using C# and .NET 4.5 for service-layer tests, demonstrating expertise in XML handling and data validation.
- Employed Selenium WebDriver and C# to create automated test cases for the AUT's UI, showcasing proficiency in frontend testing.
- Implemented code to generate detailed pass/fail reports programmatically, enabling efficient result analysis.
- Integrated C# framework with test cases written in Microsoft Test Manager as a data source, optimizing test management and execution.
- Leveraged MS SQL queries and stored procedures for effective data validation in tests, ensuring accuracy and reliability.
- Analyzed complex business logic related to flight and crew scheduling, ensuring comprehensive test coverage.

- Led and participated in code reviews, actively contributing to the improvement of legacy code.

Publicis.Sapient, Miami, FL April 2007 - May 2012

Senior QA Associate, L1

- Conducted thorough testing on applications built on multiple runtimes and platforms (.NET, Java, Adobe Flash), showcasing versatility and adaptability.
- Authored comprehensive QA documentation, including test plans, test suites, test cases, and bug reports, ensuring effective communication and knowledge transfer.
- Performed meticulous ad-hoc tests for web applications and services, demonstrating a keen eye for detail and a proactive approach to quality assurance.
- Automated server configurations for web applications (IIS, Apache) using PowerShell and shell scripts, enhancing efficiency and accuracy.
- Led site migrations for onboarding new clients, flawlessly integrating them into pre-production environments (DEV/QA/UAT), showcasing strong project management skills.
- Successfully handled build and release processes for various .NET applications, leveraging multiple scripting languages and build tools, including Python, shell, PowerShell, MSBuild, Batch, and nAnt.
